

EPP – MESPRO SAP ERP ECC 6.0 IMPLEMENTATION

The Customer

EPP is a fastest growing composite product manufacturing company with a dream to become world's leading company for fibre glass composites products by year 2020. It operates in 7 business divisions (GRP Pipes, Chemical Plants & Equipment, Building Products, Pre-fab Products, Pultrusion Products, SMC Products and CFW Division) to render various products and services to industries. Today EPP an ISO 9001:2008 certified manufacturing facility is one of the leading global players in the rapidly growing composite industry which caters to the requirement of segments such as Infrastructure, Chemical, Electrical, Railway, Automobile, Defence, Wind Energy, Offshore, Marine and Building & Construction.

The Solution

EPP partnered with Mesprosoft to implement SAP 6.0 at EPP - Manufacturing division. The implementation started from Rajkot plant with my SAP ERP 6.0 version. To address all the core areas of the business process, Mesprosoft implemented FI, CO, MM, PP, QM, SD, TR and PS. Mesprosoft provided overall program management, scope and design, build and test, business process alignment, system data conversion, organizational rollout, communication, training and ongoing application management support.

The Business Challenge

Initially EPP had implemented different applications for solving the purpose of different departments which were resulting in decentralized storage of information and delay in communication. This also gave rise to many issues to be addressed like:

- Monthly stocks, quality and MIS reports preparation was taking lot of time.
- There was lot of inventory in warehouse, goods movement between plants & keeping track of it was very difficult which was blocking the revenues.
- Sales revenues and sales dispatch were getting delayed due to improper information flow.

And finally Mr. Jayraj Shah, as the Managing Director and a true visionary realized the need of an integrated enterprise wide system that delivered centralized business information and increase the ROI.

Business Benefits

Process:

- End to End process streamlining
- Total Role-based authorization & control
- Improved visibility
- Improved delivery reliability
- Automated quality certifications go hand-in-hand with delivery

Cost:

- Optimized Inventory-Zero dead stock
- Tighter credit controls ensuring efficient cash inflow analysis
- Reduced rejection of products

Traceability:

- Instant traceability based on batch genealogy
- Audit traceability

Control:

- Establishment of tight financial controls
- Electronic approvals in various processes
- Effective threshold-based authorizations

Client Thoughts:

"We could rely on Mesprosoft to put forward high quality, experienced SAP R/3 candidates for all modules relatively quickly. When we needed an assessment of our SAP system plans and recommendations on how to meet the needs of our business, Mesprosoft provided an objective, thorough evaluation as well as potential solutions."

"Mr. Haresh Thaker" – SAP Head (EPP Composites Pvt. Ltd)
